January, 2013

If you are requesting accent layers in your ocarina, please choose one of the options below:

In Option 1, the layer of contrasting wood is along the center joint. It is separated from the main wood by a thin layer of veneer, usually either maple or cherry. This option adds \$60 to the cost of the ocarina.

In Option 2, the layer of contrasting wood is moved up into the body of the instrument in each half. This option requires more re-sawing of the wood, time and labor. This option adds \$90 to the cost of the ocarina.

Option 1: +\$60

Option 2: +\$90
